BUSINESS REQUIREMENTS DOCUMENT TEMPLATE

To aid in the creation of a successfully complete BRD document, please adhere to the following guidelines

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Purpose   | <p>A requirement is a documented condition or capability to which the product, service, or system must conform in meeting project objectives. Requirements management is a systematic approach to eliciting, organizing, and documenting the requirements of the product, service, or system. The Business Requirements Definition document serves as the project baseline that explains, in business terms, what is to be accomplished as a business outcome being delivered by implementing a technology solution.</p> <p>Because requirements are dynamic, the BRD is a progressive document in that the objective is to record what is known at the time and then build on it as the project progresses. It is from this document that the more specific design documentation (Solution Requirement Specification) can be produced based on the needs of the project and any unique and/or complementary methodology.</p> <p>The business requirement document (BRD) describes the high-level business needs whereas the Solution Requirement Document outlines the functions required to fulfil the business needs. BRD answers the questions what the business wants to do whereas the Solution Requirements Specification gives an answer to how it should be done. Whereas a business requirement states the “why” for a project, a functional requirement outlines the “what”. Functional requirements are very detailed and provide information on how business needs and goals will be delivered through a specific project/program.</p> |
| Objective | <p>The objective of a business requirement document.</p> <ul style="list-style-type: none"><li>• To get an agreement among stakeholders</li><li>• Communicate with the IT/Tech/Analytics/Cybersecurity teams, the business needs, the customer needs, and what the solution need to do to satisfy business and customer outcomes.</li><li>• To determine the input to the next phase of project</li><li>• Describe the details of the needs of the customer and business that the solution intends to meet</li><li>• The BRD is also the mechanism by way we at Adani drive standardization of tools, platforms, solutions across the group. The cost associated with the tools, platform proliferation on both licensing and as well as implementation teams add to greater expense, training, and quality issues</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Key Elements              | <p>A business unit representative who has a thorough understanding of the business processes drafts the BRD and is the owner of the BRD. The most critical component of a business requirement document is the scope of the project/initiative/innovation along with the restriction and constraints. The scope comprises of three key things</p> <ul style="list-style-type: none"> <li>• What are the problems which the business wants to solve?</li> <li>• What are the restrictions?</li> <li>• Is it worth investing the time and money required for the project?</li> <li>• The Value proposition has to be approximate and signed off by the BU Owner/Leadership</li> </ul> <p>Defining business requirements is mandatory required deliverable for all projects</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| BRD Template Completion   | <p>Collecting requirements is not as straightforward as it may first appear. It can become challenging because requirements:</p> <ul style="list-style-type: none"> <li>• aren't always obvious</li> <li>• can come from many and varied sources</li> <li>• need to be managed by cross-functional groups of people</li> <li>• can be hard to express clearly in words</li> <li>• can be expressed at different levels of detail</li> </ul> <p>For a project that is an enhancement to an existing product, service, or system, the project team reviews existing documentation; therefore, the BRD tends to be briefer. However, a project that is developing a new product, service, or system would tend to generate a longer and more detailed document.</p> <ol style="list-style-type: none"> <li>1. Do not include the Template Guidelines in your final document. Enter the project information document contributors and version control.</li> <li>2. Complete the document utilizing suggested text where applicable. Note that the blue text is NOT to be included in your final document. Its purpose is to either provide guidance for completing the document</li> <li>3. Once changes are made to your document and you're ready to finalize, ensure that you update your Table of Contents (TOC) section.</li> <li>4. Route the document for review and approval to those individuals identified as per the process flow</li> <li>5. Because the BRD is a dynamic document, once the Project Team obtains approval, the BRD is to be retained and modified as necessary to record any additional, changed, or cancelled requirements.</li> <li>6. If changes are to be made, update the Revision History information accordingly.</li> <li>7. The Business Requirements Definition document is to be retained with other project-related documentation and maintained in accordance with the business line's records retention policy.</li> </ol> |
| Empowerment & Scalability | <p>This template is provided as a guideline to follow in producing the minimum basic information needed to successfully complete a Business Requirements Definition document. Business Teams are empowered to use this template as needed to address any specific requirements of the proposed project at hand. The amount of detail included in the template will depend on the size and</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | complexity of the project. Depending on project or business line needs, requirements can be added,                                                                                                                                                                                                                                                                                                                                                       |
| Ownership | <p>The primary ownership and responsibility of generating the Business Requirement Document is with the Business Unit,</p> <ul style="list-style-type: none"><li>• Section 3,4,5 of the document has to be written and owned by the business</li><li>• Section 6 is to be filled in by the appropriate BU Service Teams (IT/Tech/Analytics/CyberSecurity)</li><li>• Section 7,8,9 has to be filled up jointly by BU Owner and BU Service Teams</li></ul> |

# 1. Purpose

The purpose of this document is to define the business and system requirements for enhancing the Minutes Generator platform with:

- Vertical-based data structuring
- AI-powered MOM (Minutes of Meeting) generation
- Microsoft Teams integration
- Document ingestion and intelligent indexing
- Compliance KPI tracking

The BRD will serve as a baseline reference for business stakeholders, implementation partners, and technical teams to design, develop, and deploy the automation solution in alignment with AGEL's project governance needs.

## 2. Scope

### 2.1 In-Scope

The following enhancements are included:

- Vertical → Company data architecture redesign
- Navigation and UI restructuring
- AI MOM generation and assistant enhancement
- Document upload (PDF, OCR, Word, PPT)
- Microsoft Teams bot integration and transcript processing
- Secretarial compliance KPI dashboards
- Search functionality across templates and minutes
- Structured folder-based storage
- DIN-CIN integration for attendee management

### 2.2 Out of Scope

The following items are explicitly excluded from the scope of this BRD:

- The following items are explicitly excluded from the scope of this project:

- Integration with non-Microsoft meeting tools
- External compliance systems beyond defined scope
- Manual archival systems outside migration requirements

### 3. Terms and Definitions

| Term / Acronym   | Definition                                |
|------------------|-------------------------------------------|
| <b>Vertical</b>  | Business unit grouping multiple companies |
| <b>MOM</b>       | Minutes of Meeting                        |
| <b>OCR</b>       | Optical Character Recognition             |
| <b>DIN</b>       | Director Identification Number            |
| <b>CIN</b>       | Company Identification Number             |
| <b>KPI</b>       | Key Performance Indicator                 |
| <b>Graph API</b> | Microsoft API for Teams integration       |

### 4. Business Requirements Summary

The current system lacks scalability, automation, and structured organization. The enhancement aims to provide:

- Scalable architecture for 200+ companies per vertical
- AI-driven automation for MOM creation
- Intelligent document processing
- Improved compliance tracking
- Advanced search and navigation

#### 4.1 As-Is Business Process (Current State)

| Process ID  | Process Area        | Scope / Steps             |
|-------------|---------------------|---------------------------|
| <b>AS 1</b> | Data Structure      | Flat company structure    |
| <b>AS 2</b> | Navigation          | Limited and non-scalable  |
| <b>AS 3</b> | MOM Creation        | Manual process            |
| <b>AS 4</b> | Document Handling   | Basic upload support      |
| <b>AS 5</b> | Teams Integration   | Not available             |
| <b>AS 6</b> | Compliance Tracking | Manual or minimal         |
| <b>AS 7</b> | Search              | Limited search capability |
| <b>AS 8</b> | Storage             | Unstructured storage      |
| <b>AS 9</b> | Attendee Selection  | Manual entry              |

## 4.2 To-Be Business Process (Future State – New / Changed)

| Process ID | Process             | Scope / Steps                             |
|------------|---------------------|-------------------------------------------|
| TB 1       | Data Structure      | Vertical → Company hierarchy              |
| TB 2       | Navigation          | Scalable hierarchical navigation          |
| TB 3       | MOM Creation        | AI-generated MOM from transcripts         |
| TB 4       | Document Handling   | Multi-format + OCR + AI indexing          |
| TB 5       | Teams Integration   | Bot joins meetings, transcript extraction |
| TB 6       | Compliance Tracking | KPI-driven dashboards                     |
| TB 7       | Search              | Advanced keyword-based search             |
| TB 8       | Storage             | Structured folder hierarchy               |
| TB 9       | Attendee Selection  | DIN/CIN-based auto selection              |

## 5. Business Use Cases

| Use Case # | Use Case Name           | Main Action                         |
|------------|-------------------------|-------------------------------------|
| UC-01      | Vertical Navigation     | Browse companies under vertical     |
| UC-02      | AI MOM Generation       | Generate MOM using AI               |
| UC-03      | Teams Bot Integration   | Bot joins Teams meetings            |
| UC-04      | Document Upload         | Upload PDFs, Word, PPT              |
| UC-05      | OCR Processing          | Extract text from scanned documents |
| UC-06      | Compliance KPI Tracking | Track secretarial metrics           |
| UC-07      | Template Customization  | Configure templates                 |
| UC-08      | Attendee Selection      | Auto-select attendees from database |
| UC-09      | Search                  | Keyword and title-based search      |
| UC-10      | Folder Navigation       | Browse structured storage           |

## 6. Business Requirements

| Req # | Description                            |
|-------|----------------------------------------|
| BR-01 | Support vertical-based hierarchy       |
| BR-02 | Enable AI-based MOM generation         |
| BR-03 | Integrate with Microsoft Teams         |
| BR-04 | Provide document ingestion and parsing |
| BR-05 | Enable compliance KPI tracking         |
| BR-06 | Support advanced search                |
| BR-07 | Enable structured storage              |
| BR-08 | Improve navigation UI                  |
| BR-09 | Ensure data security and isolation     |
| BR-10 | Provide transcript analytics           |

## 7. Functional Requirements

| Req # | Description                             |
|-------|-----------------------------------------|
| FR-01 | Implement vertical-company DB structure |
| FR-02 | Build navigation UI                     |
| FR-03 | Create Figma designs                    |
| FR-04 | Data migration to new structure         |
| FR-05 | AI assistant enhancement                |
| FR-06 | Digital PDF upload                      |
| FR-07 | OCR implementation                      |
| FR-08 | Word/PPT parsing                        |
| FR-09 | AI indexing for documents               |
| FR-10 | Compliance KPI calculation              |
| FR-11 | KPI dashboard UI                        |
| FR-12 | Teams bot integration                   |
| FR-13 | Transcript retrieval                    |
| FR-14 | MOM generation from transcript          |
| FR-15 | MOM email delivery                      |
| FR-16 | Store/display MOM & transcripts         |
| FR-17 | Transcript AI analysis                  |
| FR-18 | Structured table parser                 |
| FR-19 | Table rendering UI                      |
| FR-20 | DIN-CIN integration                     |
| FR-21 | Template sequencing                     |
| FR-22 | Search functionality                    |
| FR-23 | Structured storage backend              |
| FR-24 | Folder-tree UI                          |

## 8. Non-Functional Requirements

The following non-functional requirements define quality, performance, security, and reliability expectations:

| Req #  | Non-Functional Requirement | Description                       |
|--------|----------------------------|-----------------------------------|
| NFR 01 | Performance                | Handle 200+ companies efficiently |
| NFR 02 | Scalability                | Support horizontal scaling        |
| NFR 03 | Security                   | Role-based access control         |
| NFR 04 | Availability               | 99.9% system uptime               |
| NFR 05 | Reliability                | Fault-tolerant pipelines          |
| NFR 06 | Usability                  | Intuitive UI/UX                   |
| NFR 07 | Compliance                 | Secure data handling              |

|               |                  |                           |
|---------------|------------------|---------------------------|
| <b>NFR 08</b> | Maintainability  | Modular architecture      |
| <b>NFR 09</b> | Interoperability | Seamless API integrations |

## 9. Solution Overview

The solution will implement a **cloud-based modular architecture** comprising:

- **Database Layer:** Vertical-company hierarchy
- **AI Layer:** MOM generation, document intelligence
- **Integration Layer:** Microsoft Graph API
- **UI Layer:** Modern navigation and dashboards
- **Storage Layer:** Structured repository
- **Search Layer:** Advanced indexing engine

## 10. Key Constraints and Assumptions

### 10.1 Key Constraints

- Microsoft Graph API dependency
- Data migration complexity
- OCR accuracy limitations

### 10.2 Assumptions

The following assumptions apply to the successful execution of this project:

- DIN/CIN database is available
- Users provide valid Teams links
- Documents follow supported formats

# 11. Project Schedule

## 11.1 High-Level Project Phases

| Phase   | Key Activities           |
|---------|--------------------------|
| Phase 1 | Design (DB + UI + Figma) |
| Phase 2 | Core Development         |
| Phase 3 | AI & Integration         |
| Phase 4 | Testing & UAT            |
| Phase 5 | Go-Live & Hypercare      |

# 12. Milestones (Indicative)

| Milestone                     | Description                                                                                                                        |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| Requirement & Design Sign-Off | Final approval of business requirements and solution design by stakeholders before initiating development.                         |
| Development Completion        | Completion of core system development including database redesign, UI navigation, AI MOM features, and document ingestion modules. |
| Integration Completion        | Successful integration of Microsoft Teams bot, transcript retrieval, AI MOM generation, and document indexing pipelines.           |
| System Testing Completion     | Completion of end-to-end system testing including functional, performance, and security validation.                                |
| UAT Sign-Off                  | Formal approval after business users validate that all features meet functional and business requirements.                         |
| Production Deployment         | Go-live of the module in the production environment for end-user access.                                                           |
| Business Sign-Off             | Final acceptance from stakeholders confirming project completion and readiness for operational use.                                |

# 13. Deliverables

- BRD Document
- UI/UX Designs (Figma)
- Database Design Documents

- AI Models & Pipelines
- Integrated Platform
- Test Cases & Reports
- User Documentation

## 14. Risk & Mitigation

| Risk                       | Mitigation Strategy       |
|----------------------------|---------------------------|
| Data Loss During Migration | Backup and validation     |
| OCR Accuracy Issues        | Manual validation support |
| API Failures               | Retry mechanisms          |
| Performance Issues         | Load testing              |

## 15. Tasks and description

| Task ID | Task                | Description                 |
|---------|---------------------|-----------------------------|
| T1      | DB Redesign         | Vertical hierarchy          |
| T2      | Navigation UI       | Scalable UI                 |
| T3      | Figma Design        | Prototypes                  |
| T4      | Data Migration      | Legacy data move            |
| T5      | AI Context Refactor | AI enhancements             |
| T6      | Document Upload     | Multi-format ingestion      |
| T7      | OCR Pipeline        | Scanned document processing |
| T8      | Teams Integration   | Bot & transcript            |
| T9      | MOM Generation      | AI-based generation         |
| T10     | Search & Storage    | Advanced search & folder    |
| T11     | KPI Dashboard       | Compliance metrics          |
| T12     | Testing             | End-to-end validation       |

## 16. Schedule Dependencies

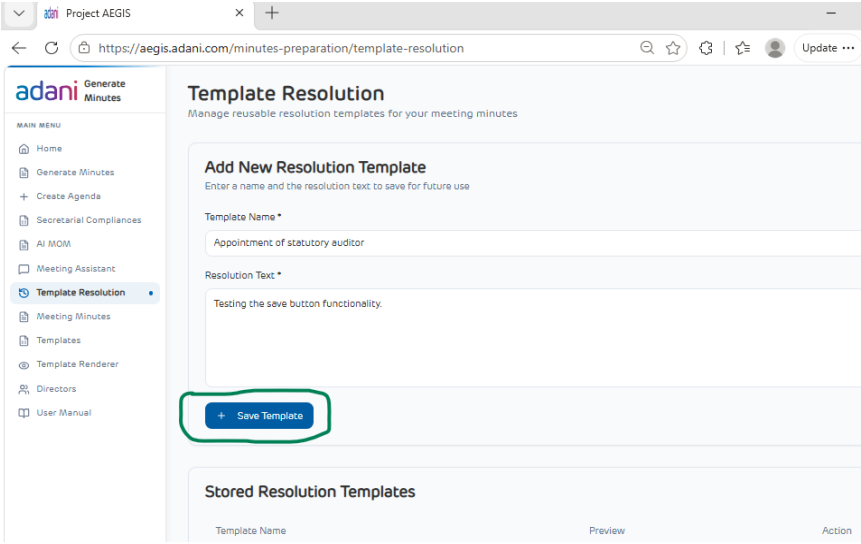

The project schedule is dependent on the following:

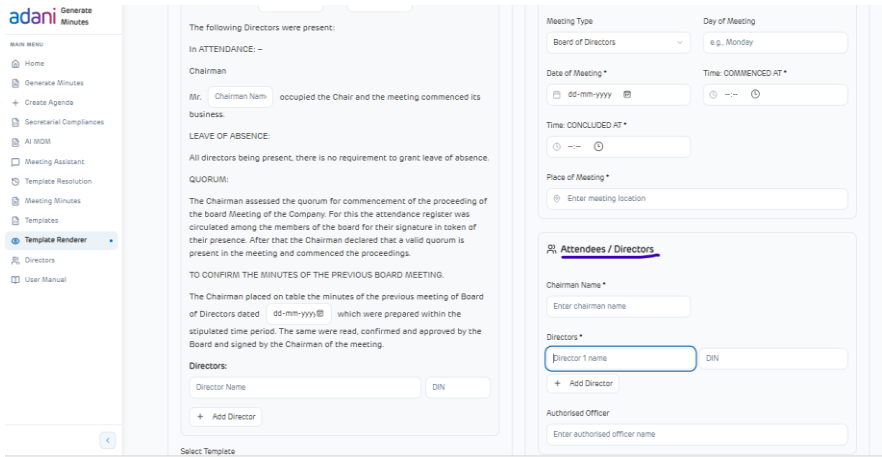

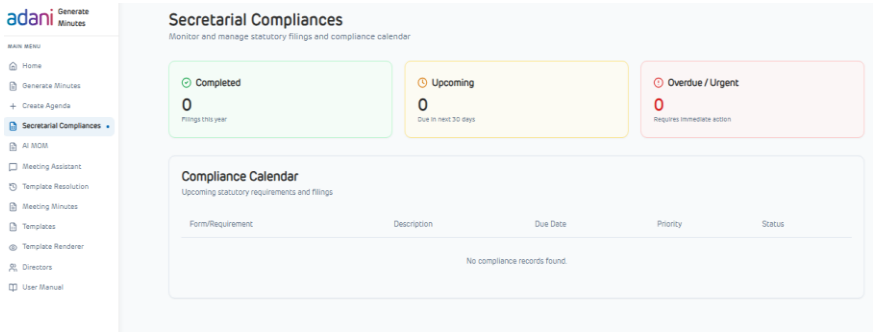

| Dependency  | Description                          |
|-------------|--------------------------------------|
| UI Design   | Required before frontend development |
| DB Redesign | Required before migration            |

|                         |                                |
|-------------------------|--------------------------------|
| <b>Graph API Access</b> | Required for Teams integration |
| <b>AI Models</b>        | Required for MOM generation    |
| <b>Data Migration</b>   | Required before UAT            |

## 17. Enhancement screenshots

### a. Enhancements for Minutes Generator

| Sl. No. | Steps                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Comments/Screenshots                                                                |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| 1       | <p>‘Template Resolution’ &gt;&gt;<br/>This feature allows users to create and add standard templates which can be stored and used during Minutes Generator (users are provided with an option to save with the template name)</p> <p>In the Template Resolution, the save option to be enabled so that it is working.</p> <p>In Meeting Resolutions, in resolution template, the data to be in same format (table/text, etc.) as entered by the user.</p> <p>Dropdown option and type search functionality to be added in the Meeting Resolutions.</p> |  |

|   |                                                                                                                                                                             |                                                                                                                                                                                       |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2 | In the Template Renderer, attendance tab, the names of attendees to be added from company list and option to add the attendees manually.                                    |                                                                                                     |
| 3 | Role based access control to be applied.                                                                                                                                    | The admin master access to reside with Pragnesh Darji, Kamlesh Bhagia and Puneet Bansal.                                                                                              |
| 4 | Meeting wise and person wise tracking of meeting attendance.                                                                                                                | A feature is to be given (a report) where the attendance can be tracked for the attendees of the meetings on the basis of meetings as well as based on the individual attendee names. |
| 5 | The secretarial compliances report to be created by using OCR and extracting the details of meetings, dates and attendees, i.e. number of meetings attended by individuals. |                                                                                                   |
| 6 | For the entity list in the vertical (BU), type search and dropdown both functionalities to be added.                                                                        |                                                                                                                                                                                       |
| 7 | The minutes generated need to be saved in a structured path of folders as described: -                                                                                      | <b>Vertical (BU)-&gt;Company Name-&gt; Meeting-&gt; Type of meeting-&gt; Date(year)</b>                                                                                               |

|    |                                                                                                  |  |
|----|--------------------------------------------------------------------------------------------------|--|
| 8  | The user needs to have an upload option for both word/pdf formats for Repository (OCR & upload). |  |
| 9  | Template option and sequencing option to be available with the user for generating minutes.      |  |
| 10 | The user needs to be able to search from title, or type search using keywords.                   |  |

## **b. Enhancements for Chatbot**

| <b>Sl. No</b> | <b>Steps</b>                        | <b>Comments/Screenshots</b>                                                                             |
|---------------|-------------------------------------|---------------------------------------------------------------------------------------------------------|
| 1             | <b>AI functionality to be added</b> | AI features chatbot will work on that specific vertical ==> company --> with their supported documents. |
